According to our (Global Info Research) latest study, the global Pipe Liner market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Pipe liners are used to prevent leakage or infiltration in pipes and piping systems. There are many different types of products. Traditional pipe liners and pipe lining systems are sleeves, casings, or supports that are inserted along the length of the pipe. By contrast, loose liners are prefabricated products that are dropped into place to form a protective lining system. Films, barrier membranes, coated cloths and tarps are also available. Some pipe liners and pipe lining systems are formed in place through an immersion, spray-on, spray-cast or thermal deposition process. These products are available as liquids, powders, overlay rods, and wires. Other pipe liners consist of tiles, blocks, or sectional elements that are cemented or bonded to a surface and then grouted or sealed. Wear plates or wear strips may also be attached through bonding, brazing, or welding.
