Abstracts

The global Pipe Liner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Pipe liners are used to prevent leakage or infiltration in pipes and piping systems. There are many different types of products. Traditional pipe liners and pipe lining systems are sleeves, casings, or supports that are inserted along the length of the pipe. By contrast, loose liners are prefabricated products that are dropped into place to form a protective lining system. Films, barrier membranes, coated cloths and tarps are also available. Some pipe liners and pipe lining systems are formed in place through an immersion, spray-on, spray-cast or thermal deposition process. These products are available as liquids, powders, overlay rods, and wires. Other pipe liners consist of tiles, blocks, or sectional elements that are cemented or bonded to a surface and then grouted or sealed. Wear plates or wear strips may also be attached through bonding, brazing, or welding.

This report studies the global Pipe Liner production, demand, key manufacturers, and key regions.
