Abstracts

According to our (Global Info Research) latest study, the global Pipeline Canned Motor Pump market size was valued at USD 844.8 million in 2022 and is forecast to a readjusted size of USD 1036.6 million by 2029 with a CAGR of 3.0% during review period.

Pipeline Canned Motor Pump adopts a unique structure that is fully enclosed and has no mechanical seal. The stator and rotor are separately shielded and sealed by stainless steel sleeves, and the transported liquid can enter the interior of the motor for cooling. It solves the problems that ordinary pipeline electric pumps use mechanical seals, which lead to easy leakage of the transported medium, environmental pollution, poor operational reliability, and difficult maintenance.

The pipeline canned motor pump, also known as the encapsulated leak-free pump, is gaining increasing popularity in the market. What sets this type of pump apart is its compact design where the motor and the operational components of the pump are completely sealed, eliminating the risk of leaks. This is crucial for many industries, especially in the chemical, oil, and gas sectors, as they deal with a variety of corrosive, hazardous, or expensive fluids. With environmental regulations continuously evolving, there is a steady growth in demand for pipeline canned motor pumps, as they help reduce environmental risks and operating costs.
