Abstracts

The global Pipeline Canned Motor Pump market size is expected to reach \$ 1036.6 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

The pipeline canned motor pump, also known as the encapsulated leak-free pump, is gaining increasing popularity in the market. What sets this type of pump apart is its compact design where the motor and the operational components of the pump are completely sealed, eliminating the risk of leaks. This is crucial for many industries, especially in the chemical, oil, and gas sectors, as they deal with a variety of corrosive, hazardous, or expensive fluids. With environmental regulations continuously evolving, there is a steady growth in demand for pipeline canned motor pumps, as they help reduce environmental risks and operating costs.

Pipeline Canned Motor Pump adopts a unique structure that is fully enclosed and has no mechanical seal. The stator and rotor are separately shielded and sealed by stainless steel sleeves, and the transported liquid can enter the interior of the motor for cooling. It solves the problems that ordinary pipeline electric pumps use mechanical seals, which lead to easy leakage of the transported medium, environmental pollution, poor operational reliability, and difficult maintenance.

This report studies the global Pipeline Canned Motor Pump production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Pipeline Canned Motor Pump, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year. This report explores demand trends and
