Abstracts

The global Pipeline Liquid, Paste and Slurry Metal Detector market size is expected to reach \$ 138.9 million by 2029, rising at a market growth of 3.0% CAGR during the forecast period (2023-2029).

A pipeline liquid, paste, and slurry metal detector is a specialized device designed to detect metal contaminants in pipelines carrying liquids, pastes, or slurries. These contaminants can include small pieces of metal that may have broken off from processing equipment, or metal fragments from packaging materials. The detector is typically installed in the pipeline and uses a combination of electromagnetic fields and signal processing to identify the presence of metal contaminants. When a metal object is detected, the detector sends a signal to an alarm or shutdown system, which can alert operators to the presence of the contaminant and trigger an automatic shutdown of the pipeline if necessary.
