## Abstracts

According to our (Global Info Research) latest study, the global Pipeline and Tank Inspection Robots market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

When inspecting tanks, the robot uses a sediment removal system to remove sediment from the bottom of the tank, then scans the bottom of the tank using a phased array ultrasonic testing (PAUT) array. The phased array ultrasonic array then scans the bottom of the tank to measure thickness, collecting 18,000 A-Scan scans for every square foot covered. The data is reviewed in real time by an operator to ensure data collection and quality. The robot, along with its accompanying three-person team, can inspect above-ground tanks containing petroleum, diesel, jet fuel, gasoline, ethanol, water, and other liquids.
