A Pipeline Oxygen Flow Meter is a medical device that delivers oxygen continuously to patients via a central oxygen pipeline system installed in hospitals or healthcare facilities. Oxygen is supplied to each bedside or usage point, where patients can inhale it through a mask, nasal cannula, or other oxygen delivery devices. Compared to portable oxygen cylinders, pipeline oxygen inhalers provide stable and continuous oxygen flow, making them suitable for long-term therapy or critically ill patients.

The demand for high-precision oxygen flow control devices continues to grow, particularly in hospitals, elderly care centers, and rehabilitation facilities. The widespread application of these products is driving the development of the entire industry.
