According to our (Global Info Research) latest study, the global Pipelined ADC market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

A pipelined analog-to-digital converter is a high-speed, high-efficiency analog-to-digital converter used to convert analog signals to digital signals. It is a multi-level structure in which each level completes a part of the analog-to-digital conversion operation, thereby realizing high-speed parallel processing. The basic structure of a pipelined ADC includes an input sampling circuit, a preamplifier, a comparator array, a digital encoder, a digital-to-analog converter (DAC) and a digital logic control circuit. Pipelined analog-to-digital converters are widely used in high-speed data acquisition, communication, radar, image processing, wireless communication and other fields, and have important application value for applications that require high-speed, high-efficiency, and high-precision analog-to-digital conversion requirements.
