Piperylene - also known as 1,3-pentadiene - is produced as part of the separation process of crude C5 materials from pyrolysis gasoline (pygas) – both by-products of ethylene manufacture. It is essentially derived from crude oil via a number of extraction steps.

Scope of the Report:

This report focuses on the Piperylene in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Piperylene, is an olefins co-product produced during the manufacturing process. It is mainly used to produce hydrocarbon resins with applications in various industries, such as adhesives, paints, rubbers and so on. Among those applications, demand from adhesives industry is the largest one, holding 77.50% share in 2017.

Many piperylene manufacturers have overall industry chains, from the upstream industries to downstream industries, which mean that they have sufficient raw materials and they also expand their piperylene chain to the hydrocarbon resins fields.

Global production of piperylene increased from 512.3 K MT in 2013 to 634.5 K MT in 2017. China, USA and Japan are the major production regions of piperylene. Nearly 70% of piperylene comes from the three regions in 2017.

As for consumption, China is the largest consumer of piperylene. The country consumed 227 K MT of piperylene in 2017, followed by USA, with 17.4% consumption

share.

With recovery of downstream industries, demand of hydrocarbon resins keeps upward tendency, stimulating the industry development of piperylene market accordingly. The worldwide market for Piperylene is expected to grow at a CAGR of roughly 5.3% over the next five years, will reach 1200 million US\$ in 2023, from 880 million US\$ in 2017, according to a new GIR (Global Info Research) study.
