## Abstracts

According to our (Global Info Research) latest study, the global Piroxibene Tablets market size was valued at US\$ 30.87 million in 2025 and is forecast to a readjusted size of US\$ 150 million by 2032 with a CAGR of 6.5% during review period.

Pirociclib is a highly selective oral CDK4/6 inhibitor independently developed by a Chinese pharmaceutical company. By specifically inhibiting cyclin-dependent kinases 4 and 6, it blocks the progression of tumor cells from the G1 phase to the S phase, thereby inhibiting cancer cell proliferation. It is mainly indicated for the treatment of locally advanced or metastatic breast cancer that is hormone receptor-positive and human epidermal growth factor receptor 2-negative. As a new generation of targeted antineoplastic agents, it features high target selectivity, controllable safety and convenient administration. It can significantly prolong progression-free survival and improve clinical benefits in patients, filling an important gap in the application of domestic innovative CDK4/6 inhibitors in the treatment of advanced breast cancer, and providing a more accessible treatment option for clinical practice. In 2025, global Pirociclib production reached approximately 150,000 bottles.

The CDK4/6 inhibitor market where Pirociclib operates is in a stage of rapid growth coupled with intense competition. As a new-generation targeted drug independently developed in China, it has formed a differentiated advantage among imported original products and domestic similar drugs by virtue of its full-course indication coverage, unique positioning for single-agent later-line therapy, and favorable safety profile. At present, there is substantial demand for the treatment of HR-positive advanced breast cancer in China, and the inclusion in medical insurance has further improved drug accessibility, supporting its commercial expansion. Nevertheless, the market also faces

challenges such as an increasing number of similar products, overlapping indications, price competition, and patient stratification. Its long-term growth relies on the deepening of clinical evidence, expansion of indications, and continuous validation of real-world application.
