According to our (Global Info Research) latest study, the global Piston Melt Filter market size was valued at US\$ million in 2025 and is forecast to a readjusted size of US\$ million by 2032 with a CAGR of %during review period.

A piston melt filter is a filtration device used in the plastics processing industry to remove impurities and contaminants from molten plastic materials. It typically consists of a cylindrical housing with a piston-driven filtration screen or mesh. The molten plastic is forced through the screen by the piston, allowing the filter to capture particles, gels, and other undesired materials. This process helps ensure the quality and purity of the molten plastic before it is further processed or molded into end products. Piston melt filters are commonly employed in extrusion processes, such as those used in the production of films, sheets, and other plastic products.
