A piston pump is a reciprocating pump that uses a piston to make reciprocating motion in a closed volume, so that it sucks in the medium when the volume decreases and presses out the medium when the volume increases. This pump is also called an electric reciprocating pump. A plunger pump is a positive displacement pump that uses a plunger to make reciprocating motion in the plunger cavity to change the volume, thereby achieving the suction, compression and discharge of the medium. It is a type of reciprocating pump and also a type of volumetric pump.
