## Abstracts

The global PLA Biodegradable Packaging Film market size is expected to reach \$ 1555 million by 2032, rising at a market growth of 14.6% CAGR during the forecast period (2026-2032).

PLA Biodegradable Packaging Film is a flexible packaging film made primarily from polylactic acid, a biodegradable polymer derived from renewable plant sugars, that is designed to break down under composting conditions into natural components. It is produced as a base film that can be used alone or converted into laminated structures and finished packaging formats, and it is selected when brand owners want a renewable content story alongside compostability and when the application can tolerate the material's barrier and thermal constraints. In packaging, it is most commonly used for transparent films, lidding, wraps, and certain types of bags and pouches, especially where product requirements and disposal pathways align with composting. The bulk price of PLA Biodegradable Packaging Film ranges from \$3,000 to \$8,000 per ton, with the industry's overall gross margin typically between 20% and 40%.

Upstream, the supply chain starts with agricultural feedstocks such as corn or sugarcane, which are processed into fermentable sugars and converted into lactic acid, followed by polymerization into PLA resin and compounding to tailor properties such as toughness, heat resistance, and processability. Film producers then extrude and orient PLA into films and sell rollstock to converters that print, slit, laminate, and form the film into pouches, lidding, overwrap, and other flexible packaging formats, often integrating compostable inks, adhesives, and barrier layers to meet performance needs.

Downstream, the primary customers are packaging converters, food and beverage brands, foodservice operators, and retailers, with end markets spanning fresh produce, snacks, bakery, and certified compostable organics bags, and the ultimate value

proposition depends on whether local collection and industrial composting systems can reliably accept and process the material after use.
