According to our (Global Info Research) latest study, the global Planar Magnetic Drive Conveyor Systems market size was valued at US\$ 2420 million in 2025 and is forecast to a readjusted size of US\$ 3392 million by 2032 with a CAGR of 5.0% during review period.

The planar magnetic drive conveyor system is an innovative automated transport solution that uses the principle of magnetic field drive to achieve contactless and flexible transportation of materials on a two-dimensional plane. The system generates a controllable electromagnetic field through an embedded coil array, which interacts with the permanent magnets installed on the transport carrier to achieve the suspension and movement of the carrier. This design eliminates the friction and wear in traditional mechanical transmission and provides a faster, smoother and almost silent operation experience. Each transport unit can be independently programmed to dynamically adjust the speed, direction and path according to production needs, greatly improving the response speed and efficiency of the production line.
