According to our (Global Info Research) latest study, the global Plane Diffraction Grating market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A planar diffraction grating is an optical element that utilizes diffraction phenomena for spectral analysis or wavelength measurement. It consists of a series of equally spaced and parallel lines or grooves that can be divided into light-transmitting and opaque areas.

A planar diffraction grating is an optical element that diffracts light when incident light hits it. The wavefronts generated by diffraction undergo interference superposition to form a series of light and dark diffraction fringes, called the diffraction spectrum.
