The planetary reducer for construction machinery is a transmission device designed for heavy machinery and equipment. It has the characteristics of compact structure, strong load-bearing capacity, wide range of reduction ratios and high transmission efficiency. It achieves efficient reduction and torque transmission through the mutual meshing between the planetary gears, sun gears and ring gears, and can provide large torque output under the premise of small size. This kind of reducer is widely used in construction machinery and equipment, such as cranes, excavators, bulldozers, crawler vehicles, etc., and is particularly suitable for occasions that require large loads, low-speed operation and high-precision control. The multi-stage gear design of the planetary reducer makes it adaptable to various harsh working conditions. It has the advantages of long life, smooth operation and easy maintenance, so it occupies an important position in the field of construction machinery.
