## Abstracts

Liquefied Natural Gas (LNG) is a natural gas that is transformed into liquid state by cooling it to below -163C. Essential requirements to set up LNG chain include investment in exploration and production, liquefaction, shipping, and storage and regasification. Planned LNG describes expansion of storage and regasification terminal capacities. This terminal also aids in lower transportation costs. LNG is a clean burning fuel majorly used for long vehicles. LNG helps in reduction of emissions, which prompts many fuel service providers to adopt LNG as an alternative fuel.
