Plant-based foods and beverages are food and drink products formulated primarily or entirely from plant-derived ingredients that are designed to replace or complement animal-based foods, delivering nutrition, taste, texture, and functionality while addressing sustainability, health, ethical, and dietary preferences.

Upstream covers agricultural production of grains, legumes, oilseeds, nuts, and specialty crops along with fermentation substrates, enzymes, flavors, colors, and packaging materials; midstream includes ingredient processing such as protein concentration and isolation, plant oil refining, starch and fiber extraction, extrusion, emulsification, fermentation, blending, and formulation into finished plant-based foods and beverages by branded manufacturers and co-packers; downstream consists of retail, e-commerce, foodservice, and institutional channels delivering plant-based products to consumers, supported by cold-chain logistics, marketing, regulatory compliance, nutrition labeling, and sustainability certification.

Globally, projects under construction and planned include new large-scale oat and plant beverage factories, expanded plant-based meat and ready-meal manufacturing lines, additional extrusion capacity for whole-cut meat analogs, fermentation facilities for specialty proteins and functional ingredients, regional protein processing plants for peas, soy, and fava beans, integrated plant-based food parks combining ingredient

processing and final product manufacturing, automation upgrades to reduce unit costs, and localization projects in Asia-Pacific, Europe, and North America to secure raw material supply, shorten supply chains, and meet growing private-label and foodservice demand.
