## Abstracts

The global Plant Design Management Systems Software market size is expected to reach \$ 657 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032).

Factory design and management system software is a type of digital tool used for planning, designing, simulating, and optimizing the entire lifecycle of a factory. It encompasses core functions such as process planning, layout design, logistics simulation, equipment management, and personnel allocation. Through technologies like 3D modeling, discrete event simulation, and data-driven analysis, this software helps companies simulate factory operations in a virtual environment, identify potential problems (such as logistics bottlenecks, equipment interference, and insufficient capacity), optimize design solutions, reduce physical trial-and-error costs, and improve factory production efficiency, resource utilization, and operational stability. It is widely used in discrete manufacturing (such as automotive, electronics, and machinery) and process industries (such as chemical, energy, and metallurgy) and is a key supporting technology for achieving smart factory construction and digital transformation.

Currently, factory design management system software is at the core of its digital transformation, with the market exhibiting rapid growth and high penetration. Mainstream trends include full lifecycle collaboration centered on digital twins and BIM/DBDM (Design-Build-Delivery-Maintain) integration, cloudification and multi-terminal access, and deep integration with ERP/MES/PLM systems. Suppliers are evolving from single design tools to end-to-end integrated platforms encompassing design, modeling, verification, cost control, risk management, and change tracking; user needs are focusing on improving design collaboration efficiency, reducing design change costs, shortening delivery cycles, and achieving greater traceability and

compliance. Globally, mature markets favor customized and high-end solutions, while emerging markets are driven by modularity, cloud services, and localized support.
