## Abstracts

Plant growth chambers are designed to produce environmental conditions (humidity and temperature) that maximize plant growth. They are sometimes called environmental chambers or terrestrial plant growth chambers. These devices create the natural environment to facilitate growth. It provides the standard light, humidity and airflow that you can get in an original environment. Applications include plant breeding and genetic research, photosynthesis, nutrition, and other aspects of plant physiology. Product features for plant growth chambers may include touch-screen controls, observation windows, additional lighting, humidity control, CO2 enrichment, spray nozzle packages, air-cooled condensing, remote-controlled condensing, dry alarms, cabinets and shelving, dimmable lighting, extended temperature ranges, and heated or glass doors.
