Plantar fasciitis socks are specially designed for patients with plantar fasciitis, aiming to relieve the pain and discomfort caused by plantar fasciitis through specific design or materials. Plantar fasciitis is mostly caused by long-term strain, friction and extrusion, which lead to aseptic inflammation of soft tissues such as fascia. Under inflammatory stimulation, it will cause pain in the sole of the foot, and in severe cases, it will limit the patient's walking and other functions. Therefore, the design principle of plantar fasciitis socks is mainly to reduce the pressure and friction on the sole of the foot through specific materials, structures or functions, thereby relieving inflammation and pain.
