Plasma Cutting Systems are advanced cutting tools used in industries for cutting various types of metals and conducting metal fabrication processes. They utilize the principle of plasma, which is created by passing a gas through an electrically charged channel, generating a high-temperature plasma arc. This arc is then directed towards the metal surface, melting or vaporizing the material and creating a clean and precise cut.

Plasma Cutting Systems are widely used in industries such as metal fabrication, automotive manufacturing, shipbuilding, construction, and aerospace. They offer benefits like high cutting speed, precise cuts, versatility in cutting different types and thicknesses of metals, and cost-effectiveness compared to traditional cutting methods.
