According to our (Global Info Research) latest study, the global Plasma Electrolytic Oxidation Service market size was valued at US\$ 377 million in 2023 and is forecast to a readjusted size of USD 555 million by 2030 with a CAGR of 6.0% during review period.

Plasma Electrolytic Oxidation (PEO) services provide advanced surface treatment solutions for lightweight metals like aluminum, magnesium, and titanium. This electrochemical process creates a hard, dense ceramic oxide coating on the metal surface by applying high-voltage plasma discharges in an electrolyte solution. The resulting coating offers exceptional wear resistance, corrosion protection, thermal stability, and dielectric properties, making it ideal for applications in aerospace, automotive, electronics, and biomedical industries. PEO services are valued for their ability to enhance the performance and lifespan of components, while also being environmentally friendly due to the absence of hazardous chemicals or heavy metals in the process.
