PECVD is a deposition technology to deposit thin films using plasma technology. Compared to other deposition technologies such as PVD and Thermal CVD which are widely used for semiconductor device fabrication, PECVD can deposit thin films with high uniformity over the wafers at relatively low temperature (less than 350°C). Furthermore, this plasma deposition technology offers excellent material property control (refractive index, hardness and more) of thin films such as SiO₂, SiN_x, a-Si, SiON and DLC.
