According to our (Global Info Research) latest study, the global Plasma Etch System market size was valued at US\$ 8184 million in 2024 and is forecast to a readjusted size of USD 18170 million by 2031 with a CAGR of 12.2% during review period.

This report studies the Plasma Etch System market. Plasma Etching System is a series of devices and equipment used together to perform plasma etching.

Plasma etching is a form of plasma processing used to fabricate integrated circuits. It involves a high-speed stream of glow discharge (plasma) of an appropriate gas mixture being shot (in pulses) at a sample. The plasma source, known as etch species, can be either charged (ions) or neutral (atoms and radicals). During the process, the plasma generates volatile etch products at room temperature from the chemical reactions between the elements of the material etched and the reactive species generated by the plasma. Eventually the atoms of the shot element embed themselves at or just below the surface of the target, thus modifying the physical properties of the target.

North America is the largest market with about 51% market share. Japan is follower, accounting for about 20% market share.

The key players are Oxford Instruments, ULVAC, Lam Research, AMEC, PlasmaTherm, SAMCO Inc., Applied Materials, Inc., Sentech, SPTS Technologies (an Orbotech Company), GigaLane, CORIAL, Trion Technology, NAURA, Plasma Etch, Inc., Tokyo Electron Limited etc. Top 3 companies occupied about 18% market share.
