Abstracts

The global Plasma Incubators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A plasma incubator prevents the clumping of stationary platelets in blood by providing a constant, gentle, reciprocating action which continually mixes platelets inside platelet bags. To keep platelets well oxygenated and at a constant temperature platelet shakers have perforated drawers to allow air to circulate.

This report studies the global Plasma Incubators production, demand, key manufacturers, and key regions.
