Abstracts

Plasma light is well known for its high light density, and for its spectrum which is very close to natural sun light. At the same time, efficiency is similarly good as when using LED. Plasma lights are a new type of grow light that boasts a full spectrum, unlike many other types of lights on the market right now. Like many new grow light technologies, manufacturers are quick to claim that their lights boast a full spectrum, but it's only recently that those promises have been fulfilled.
