## Abstracts

According to our (Global Info Research) latest study, the global Plasma and Corona Treatment Systems market size was valued at US\$ 409 million in 2025 and is forecast to a readjusted size of US\$ 556 million by 2032 with a CAGR of 4.6% during review period.

A Plasma Treatment System is a high-precision apparatus that utilizes ionized gas—known as plasma—to modify the surface characteristics of materials at a microscopic level. By applying high-frequency, high-voltage energy to a process gas (such as air,  $O_2$ ,  $Ar$ , or  $N_2$ ), the system generates a stream of reactive species, including ions, electrons, and free radicals. When this plasma jet interacts with a substrate, it performs fine-grained cleaning by breaking down organic contaminants and creating new chemical bonding sites through surface activation. This technology is essential for enhancing adhesion in demanding industries like automotive, electronics, and medical device manufacturing, where superior bonding of glues, inks, or coatings is required on chemically inert surfaces.

A Corona Treatment System is an industrial solution primarily designed for the surface activation of wide-format webs, films, and foils. It works by applying a high voltage across an electrode and a grounded roller, causing a localized ionization of the surrounding air, known as a 'corona discharge.' This discharge generates a stream of electrons and ozone that strikes the substrate's surface, increasing its surface tension and chemical reactivity. Corona treatment is the standard method in the packaging and converting industries to ensure that inks, coatings, and laminates adhere properly to non-polar plastic films like Polyethylene (PE) and Polypropylene (PP).

Global key players of Atmospheric Pressure Plasma Surface Treatment Machine include PVA TePla, Plasmatrete, Diener Electronic, Enercon Industries Corporation, Oksun, etc. The top five players hold a share about 33%. Asia-Pacific is the world's largest market for Atmospheric Pressure Plasma Surface Treatment Machine and holds a share about 45%, followed by Europe and North America, with share about 27% and 24%, separately. In terms of product type, Offline Type is the largest segment, accounting for a share about 90%. In terms of application, Automotive is the largest field with a share about 29 percent.
