Abstracts

Plasma Protein Binding Assay is an assay, or an analytic procedure, whose procedure or method relies on the binding of ligand molecules to receptors, antibodies or other macromolecules.[1] A detection method is used to determine the presence and extent of the ligand-receptor complexes formed, and this is usually determined electrochemically or through a fluorescence detection method.[2] This type of analytic test can be used to test for the presence of target molecules in a sample that are known to bind to the receptor.
