The global Plasma Radiofrequency Ablation Machine market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Plasma Radiofrequency Ablation Machine is a device that uses high-frequency electric current to heat and destroy abnormal tissues, such as tumors, in various organs of the body. It is a minimally invasive procedure that can be performed under local anesthesia or conscious sedation. The machine consists of a generator that produces the electric current, and an electrode that delivers the current to the target tissue through a needle or an array.

The upstream industry chain of the product includes the suppliers of raw materials and components, such as metals, plastics, wires, circuits, etc. The downstream industry chain includes the distributors, hospitals, clinics, and patients who use the product. The product is mainly used for treating liver cancer, kidney cancer, lung cancer, bone cancer, thyroid nodules, and uterine fibroids.
