## Abstracts

According to our (Global Info Research) latest study, the global Plasma Resectoscope market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Plasma resectoscopy is the most effective treatment for resection of prostate and bladder tumors. The biggest problem with conventional resectoscopes in the past was that it was easy to cause water intoxication in patients, and the hemostatic effect was poor. The surgeon was required to complete the operation within one hour. Compared with conventional resection of the prostate, bipolar plasma resection uses normal saline as irrigation fluid and adopts a dynamic plasma cutting mechanism.
