In the automotive industry, plasma cleaning machines serve various purposes. For glass and plastic components, such as windshields and windows, plasma pre-treatment enhances adhesion, improving overall production quality. In electronic component cleaning, plasma machines effectively remove tiny particles and organic contaminants from sensors and control modules, ensuring their proper function and stability. Plasma treatment also boosts the bonding strength of LED lights, extending their lifespan during assembly processes like metal evaporation and housing adhesion. In the case of seals, plasma pre-treatment improves their weather resistance and coating adhesion. Complex interior components, such as dashboards and doors, also benefit from plasma pre-treatment by activating surfaces for better painting and bonding results.
