Abstracts

The global Plasmapheresis Filters market size is expected to reach \$ 1212 million by 2032, rising at a market growth of 6.4% CAGR during the forecast period (2026-2032).

Plasmapheresis filters are disposable hollow-fiber membrane devices used to separate plasma from whole blood during membrane-based TPE or DFPP procedures. In 2025, Global Plasmapheresis Filters sales are estimated at about 6,250 K Units, with an average ex-works price of 125 US\$/Unit. The value chain includes medical membrane polymers, housings, biocompatible materials and sterile packaging upstream; plasma separator/filter and tubing-set manufacturing in the middle; and hospitals, ICUs, blood-purification centers, transplant centers and liver-care units downstream.

Demand is driven by wider use of therapeutic plasma exchange in neuroimmunology, nephrology, hematology, transplantation and critical care. Membrane-based systems can be integrated into ICU blood-purification platforms, but growth remains constrained by indications, reimbursement, installed base, regulatory approval and the cost of replacement fluids.

This report studies the global Plasmapheresis Filters production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Plasmapheresis Filters and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
