## Abstracts

The global Plasminogen market size is expected to reach \$ 70 million by 2029, rising at a market growth of 37.8% CAGR during the forecast period (2023-2029).

Global Plasminogen key players include Kedrion(Prometic), etc. North America is the largest market.

Plasminogen, the proenzyme of the fibrinolytically active enzyme plasmin, is a single chain glycoprotein with a molecular weight of about 90,000-94,000 Da (2). Various isoelectric forms exist and can be separated by means of isoelectric focusing (IEF). The complete amino acid sequence contains 790 amino acids. Native plasminogen (glu-plasminogen) has a N-terminal glutamic acid group. Partial plasma proteolysis gives rise to a molecule with N-terminal lysine (lysplasminogen). Currently, the product has obtained the designation of orphan drug by the US Food and Drug Administration (FDA) and by the European Medicines Agency (EMA). In 2021, U.S. Food and Drug Administration approved Ryplazim (plasminogen, human-tvmh) for the treatment of patients with plasminogen deficiency type 1, also referred to as hypoplasminogenemia, a disorder that can impair normal tissue and organ function and may lead to blindness.
