Abstracts

The global Plastic Antistatic Agent market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A plastic antistatic agent is a substance used to reduce or eliminate static electricity buildup on plastic surfaces. Static electricity can be a common issue with plastic materials, as they tend to accumulate electrical charges when they come into contact with other surfaces or materials.

Plastic antistatic agents work by altering the surface properties of the plastic, making it less prone to static electricity buildup. These agents typically have a low surface resistivity, which allows them to conduct electricity and dissipate any static charges that may accumulate on the plastic surface.

This report studies the global Plastic Antistatic Agent production, demand, key manufacturers, and key regions.
