The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Plastic defoaming masterbatch is an additive added during the plastic manufacturing process to reduce or eliminate the formation of foam. Foam can create imperfections in the finished product and can also affect the mechanical and physical properties of the plastic. Defoaming masterbatches usually consist of a carrier resin (such as polyethylene or polypropylene) and a defoaming agent (such as silicone oil or fatty acid). Defoamers work by lowering the surface tension of the plastic, allowing air bubbles to escape before forming visible foam.
