Plastic drainage board, also known as plastic drainage belt, has various shapes such as wave type and harmonica type. In the middle is an extruded plastic core plate, which is the skeleton and channel of the drainage belt. Its cross section is parallel cross, and the two sides are wrapped with non-woven geotextile as a filter layer. The core belt acts as a support and discharges the water infiltrated by the filter layer upwards. , It is a good vertical channel for soft foundation treatment of saturated viscous and miscellaneous fills such as silt, silty soil, flushing fill, etc., using drainage consolidation method, which greatly shortens the consolidation time of soft soil.
