## Abstracts

The global Plastic Extrusion for Lighting market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lighting extruded board is a type of plastic sheet used in lighting applications. It is usually made of materials such as polycarbonate (PC) or methyl acrylate (PMMA), which has excellent light transmission and weather resistance. This kind of board usually has uniform optical properties, which can effectively diffuse light, making the light softer and more uniform, so as to achieve better lighting effects. In addition, it has high impact resistance and UV resistance, and can be used in indoor and outdoor environments. Extruded sheet is an economical and affordable lighting material, which is widely used in the lighting design of commercial buildings, offices, hospitals, schools and other places.
