Abstracts

The global Plastic Film for Medical Application market size is expected to reach \$ 13595 million by 2032, rising at a market growth of 7.0% CAGR during the forecast period (2026-2032).

In 2025, global output of plastic film for medical application reaches 6,200,000,000 square meters, with an average selling price of 1.35 USD per square meter, total capacity of 7,400,000,000 square meters, and a gross margin of 31%.

Plastic film for medical application refers to functional polymer films used in medical devices, medical consumables, and healthcare packaging. These films are typically made from medical-grade polyethylene, polypropylene, polyurethane, polyester, or multilayer composites, offering biocompatibility, barrier performance, flexibility, sterilization compatibility, and safety. They are widely used in wound dressings, medical adhesive films, infusion and drainage-related disposables, single-use medical device packaging, and sterile protection applications.

Upstream mainly includes medical-grade resins (PE, PP, PU, PET, etc.), functional additives and coating materials, as well as extrusion, casting, and laminating equipment. The midstream consists of medical film manufacturers responsible for formulation design, film forming, lamination, and sterilization compatibility. Downstream applications focus on wound dressings, disposable medical consumables, medical devices, and sterile packaging, with end customers including hospitals, medical device manufacturers, and consumable brands that require strict regulatory compliance, batch consistency, and reliable long-term supply.
