The plastic frame activated carbon air filter is a highly efficient air purification device consisting of a plastic frame, activated carbon filter material and sealing material. The plastic frame provides support and protection for the activated carbon filter material and is usually made of ABS plastic, PP plastic, PVC plastic or PET plastic. The plastic frame needs to be strong and rigid enough to withstand the weight of the activated carbon filter media and the pressure of the air flow. Activated carbon filter material is the core component of the plastic frame activated carbon air filter and is made of activated carbon particles. Activated carbon has strong adsorption capacity and can absorb various pollutants in the air, including dust, pollen, PM2.5, volatile organic compounds (VOCs), odors, etc. The sealing material is used to seal the gap between the plastic frame and the activated carbon filter material to prevent air leakage. The sealing material needs to have good sealing and weather resistance to ensure the airtightness of the filter.
