## Abstracts

According to our (Global Info Research) latest study, the global Plastic Gears Resin market size was valued at USD 450 million in 2023 and is forecast to a readjusted size of USD 694.8 million by 2030 with a CAGR of 6.4% during review period.

Plastic gears provide a number of advantages over metal gears. They have less weight, lower inertia, and run much quieter than their metal counterparts. Plastic gears often require no lubrication or can be compounded with internal lubricants such as PTFE or silicone. Plastic gears usually have a lower unit cost than metal gears, and can be designed to incorporate other features needed in the assembly (part consolidation). These gears are also resistant to many corrosive environments. Materials used in plastic gears are, in general, engineering plastics such as polyacetal (POM) and MC Nylon which is essentially polyamid resin. In addition, U-PE and PEEK can be used.

DuPont and Celanese are the top 2 manufacturers of plastic gears resin globally and account for over 20% of global market share in total. Geographically speaking, Asia-Pacific holds over half of total market share. In terms of type, POM resin accounts for over half of total market share. In terms of end use, over 40% of global plastic gears resin yield is for automobile industry.
