Abstracts

The global Plastic Injection Molding market size is expected to reach \$ 50020 million by 2032, rising at a market growth of 4.0% CAGR during the forecast period (2026-2032).

Plastic injection molding is an extremely versatile method of mass production, and it has numerous benefits that make it an invaluable tool for creating working prototypes at scale. For the medical industry, the range of benefits for plastic injection molding are far-reaching.

In today's day and age, medical technology is advancing at an enormous rate. With this rapid increase comes a need for companies to match this rapid growth in complexity of design as well. With these advances have come intricately designed machines and tools such as pacemakers, imaging machines, and surgical tools, all of which need prototypes for testing and monitoring. Due to the extremely high pressure used in the process, plastic injection molding allows for a large amount of detail within the cast.

Once the designs and injection mold model are created and the presses are pre-programmed, the actual process of plastic injection molding is faster than other methods. With a high production output rate, ability to craft complex designs, and an ease of creation of the initial mold, plastic injection molding is a wonderfully efficient manufacturing option that can help us pave the way to the future of medical technology.

BD, Teleflex, BBRAUN, Terumo and Edwards are the top 5 players of Plastic Injection Molding, with about 23% market shares.

North America is the largest market of plastic molding for medical device currently, with a revenue market share of 40%. The second place is Europe, following North America

with the revenue market share of 21%. Asia Pacific is the third largest market of plastic molding for medical device.
