Abstracts

An Injection molding machine, also known as an injection press, is a machine for manufacturing plastic products by the injection molding process. It consists of two main parts, an injection unit and a clamping unit.

Machines are classified primarily by the type of driving systems: hydraulic, electric, or hybrid.

Instead of being driven by a hydraulic system, all-electric machines use digitally controlled, high speed and highly efficient servo motors to drive the whole process. Each axis is controlled by an independent motor for injection, extruder, clamping and ejection.

According to our (Global Info Research) latest study, the global Plastic Injection Molding Machine market size was valued at US\$ 10700 million in 2023 and is forecast to a readjusted size of USD 12980 million by 2030 with a CAGR of 2.8% during review period.

From the analysis of product segment, small and medium-sized models (clamping force ? 650 tons) occupy more than 90% of the market. Injection molding machines are mainly used in general plastics industry, automotive industry and home appliance industry.
