Abstracts

An Injection molding machine, also known as an injection press, is a machine for manufacturing plastic products by the injection molding process. It consists of two main parts, an injection unit and a clamping unit.

Machines are classified primarily by the type of driving systems: hydraulic, electric, or hybrid.

Instead of being driven by a hydraulic system, all-electric machines use digitally controlled, high speed and highly efficient servo motors to drive the whole process.

Each axis is controlled by an independent motor for injection, extruder, clamping and ejection.

Scope of the Report:

This report focuses on the Plastic Injection Molding Machine in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The end-use industries such as automotive and consumer goods has been growing and they, are expected to drive the increasing demand for injection molding machines. The heating and hydraulic pressure issue is supposed to act as the factor restraining the growth of the market. Injection molding machines work by heating plastic pellets into molten material, thereby, injecting the molten plastic into a mold, and then cooling the product. When the mold is not sealed properly, heating and hydraulic pressure issues occurs then. As a result, this causes improper venting in the injection unit of the machine. Issues such as these restrain the growth of the market.

The worldwide market for Plastic Injection Molding Machine is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from

xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
