Plastic insulated control cable is a type of cable widely used in power, industrial automation, communications and construction. Its main feature is that it uses plastic material as the insulation layer, which can effectively protect the wires inside the cable and ensure the stability of current transmission. The structure of plastic insulated control cable usually consists of conductor, insulation layer, filling material and outer sheath. Its conductor generally uses copper or aluminum and other materials with good conductivity, while the insulation layer uses plastic materials such as PVC, PE, XLPE, etc., which have good electrical insulation performance and environmental corrosion resistance.
