The global Plastic Lens Gluer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Plastic lens gluing machine is a piece of equipment specially used to glue plastic lenses together. Plastic lenses are widely used in eyeglasses, cameras and other optical equipment. Gluing multiple lenses together creates a thicker, continuous lens that improves optical performance and functionality. Plastic lens gluing machines usually use glue or other adhesives to bond lenses together. This process requires high-precision positioning, lamination and exposure steps, so precise control systems and operating skills are required. The quality of the finished lens is affected by various parameters, including the properties of the glue, the way the glue is applied, pressure, temperature, etc.
