## Abstracts

The global Plastic Magnet market size is expected to reach \$ 1025 million by 2032, rising at a market growth of 5.0% CAGR during the forecast period (2026-2032).

Plastic magnets are magnets made by mixing magnetic powders (such as ferrite, NdFeB, Samarium cobalt, etc.) with plastic substrates (such as Nylon, PPS, epoxy resin, etc.) and by a certain molding process. It has both the flexibility of plastics and the magnetism of magnetic materials and can be made into various complex shapes through injection molding, pressed, and extrusion processes.

With the rapid growth of new energy vehicles, the demand for lightweight motors, wireless charging magnets, smart sensors and automotive magnetic seals has surged, which will further promote the market development of plastic magnets. Industry 4.0 drives precision servo motors, robot joints and smart sensors to adopt customizable and energy-efficient plastic magnets, driving the plastic magnet industry to develop rapidly in the direction of high performance, lightweight and intelligent. Local government policy support. The industry depends on the international market and changes in the international political and economic situation. The uncertainty of the international situation has had a significant negative impact on the global multilateral trading system. Products are updated quickly, and product structure adjustment in the downstream application market faces challenges. Due to the wide application field of plastic magnet products and the rapid product update, product structure adjustment is a long-term challenge faced by the company.
