Plastic Mould Steels represent a specialized category of tool steels specifically formulated for the production of plastic injection and compression moulds. These steels are characterized by their exceptional polishability, uniform hardness distribution, and superior dimensional stability under thermal cycling conditions. The alloy compositions are carefully balanced to provide optimal resistance to abrasive wear, corrosion from plastic additives, and thermal fatigue, while maintaining precise mould cavity geometries throughout extended production runs. Advanced variants incorporate micro-cleanliness control and tailored heat treatment responses to meet the stringent requirements of optical-grade and high-volume plastic component manufacturing.
