Plastic pancreatic stents, also known as pancreatic duct stents, are tube-like devices made of medical-grade plastic materials that are used to treat patients with pancreatic disorders. These stents are inserted into the pancreatic duct, a small tube that connects the pancreas to the small intestine, to keep it open and allow normal flow of pancreatic juices and enzymes. The stent can be used to relieve pain, minimize inflammation, and prevent blockages that can lead to serious complications such as infections, fluid accumulation, and even pancreatic cancer. The most common conditions treated with pancreatic stents are chronic pancreatitis, pancreatic cancer, and post-operative complications.
