Abstracts

Plastic tensile testing machine adopts mechatronics design, mainly composed of load cell, transmitter, microprocessor, load driving mechanism, computer and color inkjet printer. It can test the tensile, compression, bending and other items of non-metallic and polymer materials, and can meet international standards and industry standards such as GB, ISO, JIS, ASTM, DIN, JG, JT, YB, QB, YD, QC, etc. , The whole process of data acquisition is not divided into blocks. The imported servo motor and the self-developed synchronous belt reduction system drive the ball screw to move the entire machine up and down. The characteristics of balance and stability greatly prolong the service life and efficiency of the testing machine; Connect to a computer to achieve full computer control and print standard test reports.
